Transform Your Office

Zen Felt Pod

Zen Felt Pod is a freestanding modular partition system made from ReFelt® PET, designed to create more intimate, defined spaces while enhancing acoustic comfort and privacy in open-plan environments.

Its distinctive panel construction combines sound insulation and sound absorption, helping to limit noise transmission between workstations while reducing reverberation throughout the space.

Zen Felt Pod

Available in a range of heights and widths, Zen Felt Pod includes linear and corner modules, together with two- and four-way connections that can be freely combined to shape individual workstations, lounge areas, compact meeting points, and freestanding clusters. All connection systems are fully concealed beneath felt covers, creating a clean, continuous appearance with no visible fixings. Integrated feet provide stability while allowing each configuration to remain completely freestanding and independent from the surrounding architecture.

One system,
endless configurations

**A new space to
connect, a new
dimension of privacy.**

Zen Felt Desking

Zen Felt Desking is a desk-mounted divider system made from ReFelt® PET, designed to enhance privacy and acoustic comfort at individual workstations.

Available in a range of sizes, the screens integrate seamlessly with both individual desks and benching systems, offering the flexibility to adapt to a wide variety of contemporary workplace layouts.

Zen Felt Desking

The fixing system is fully concealed within the panel, ensuring a clean aesthetic with no visible technical components. A range of clamp options allows Zen Felt Desking to be installed on desktops of different thicknesses and specifications.

The system is complemented by metal storage accessories and pen holders that hook directly onto the upper edge of the panel, with no additional fixings required. This transforms the screen from a simple acoustic divider into a functional element that also supports efficient workstation organization.

More comfort,
more privacy,
at every
workstation

Acoustic comfort, redefining the open-plan workspace

Zen Felt Wall Decor

Zen Felt Wall Decor transforms acoustic wall cladding into a distinctive decorative feature, combining the sound-absorbing properties of ReFelt® PET with three-dimensional surfaces precisely crafted through CNC machining.

Zen Felt Wall Decor

The three patterns — Fine Lines, Curve and Wave — give the wall its distinctive character through different textures and geometric expressions. Monochrome and two-tone options further expand the creative possibilities. In the two-tone version, the contrast between the background and raised elements accentuates the three-dimensional depth of the pattern, enhancing the surface's strong graphic identity.

The panels can be cut and adapted directly on site during installation and applied to the wall with no visible fixings, creating seamless surfaces where design and acoustic comfort become integral elements of the same architectural concept.

A modern office interior featuring a large wall covered in vertical, grey acoustic panels. In the foreground, a white desk holds a laptop, a clipboard, and a small plant. In the background, another desk with a monitor and a larger plant is visible. A window on the right shows a city view.

Acoustic comfort, designed
for the walls

Zen Felt Wall Paper

Zen Felt Wall Paper reimagines sound-absorbing wall covering as a true acoustic wallpaper, combining the acoustic performance of ReFelt® PET with the precision of laser-cut technology.

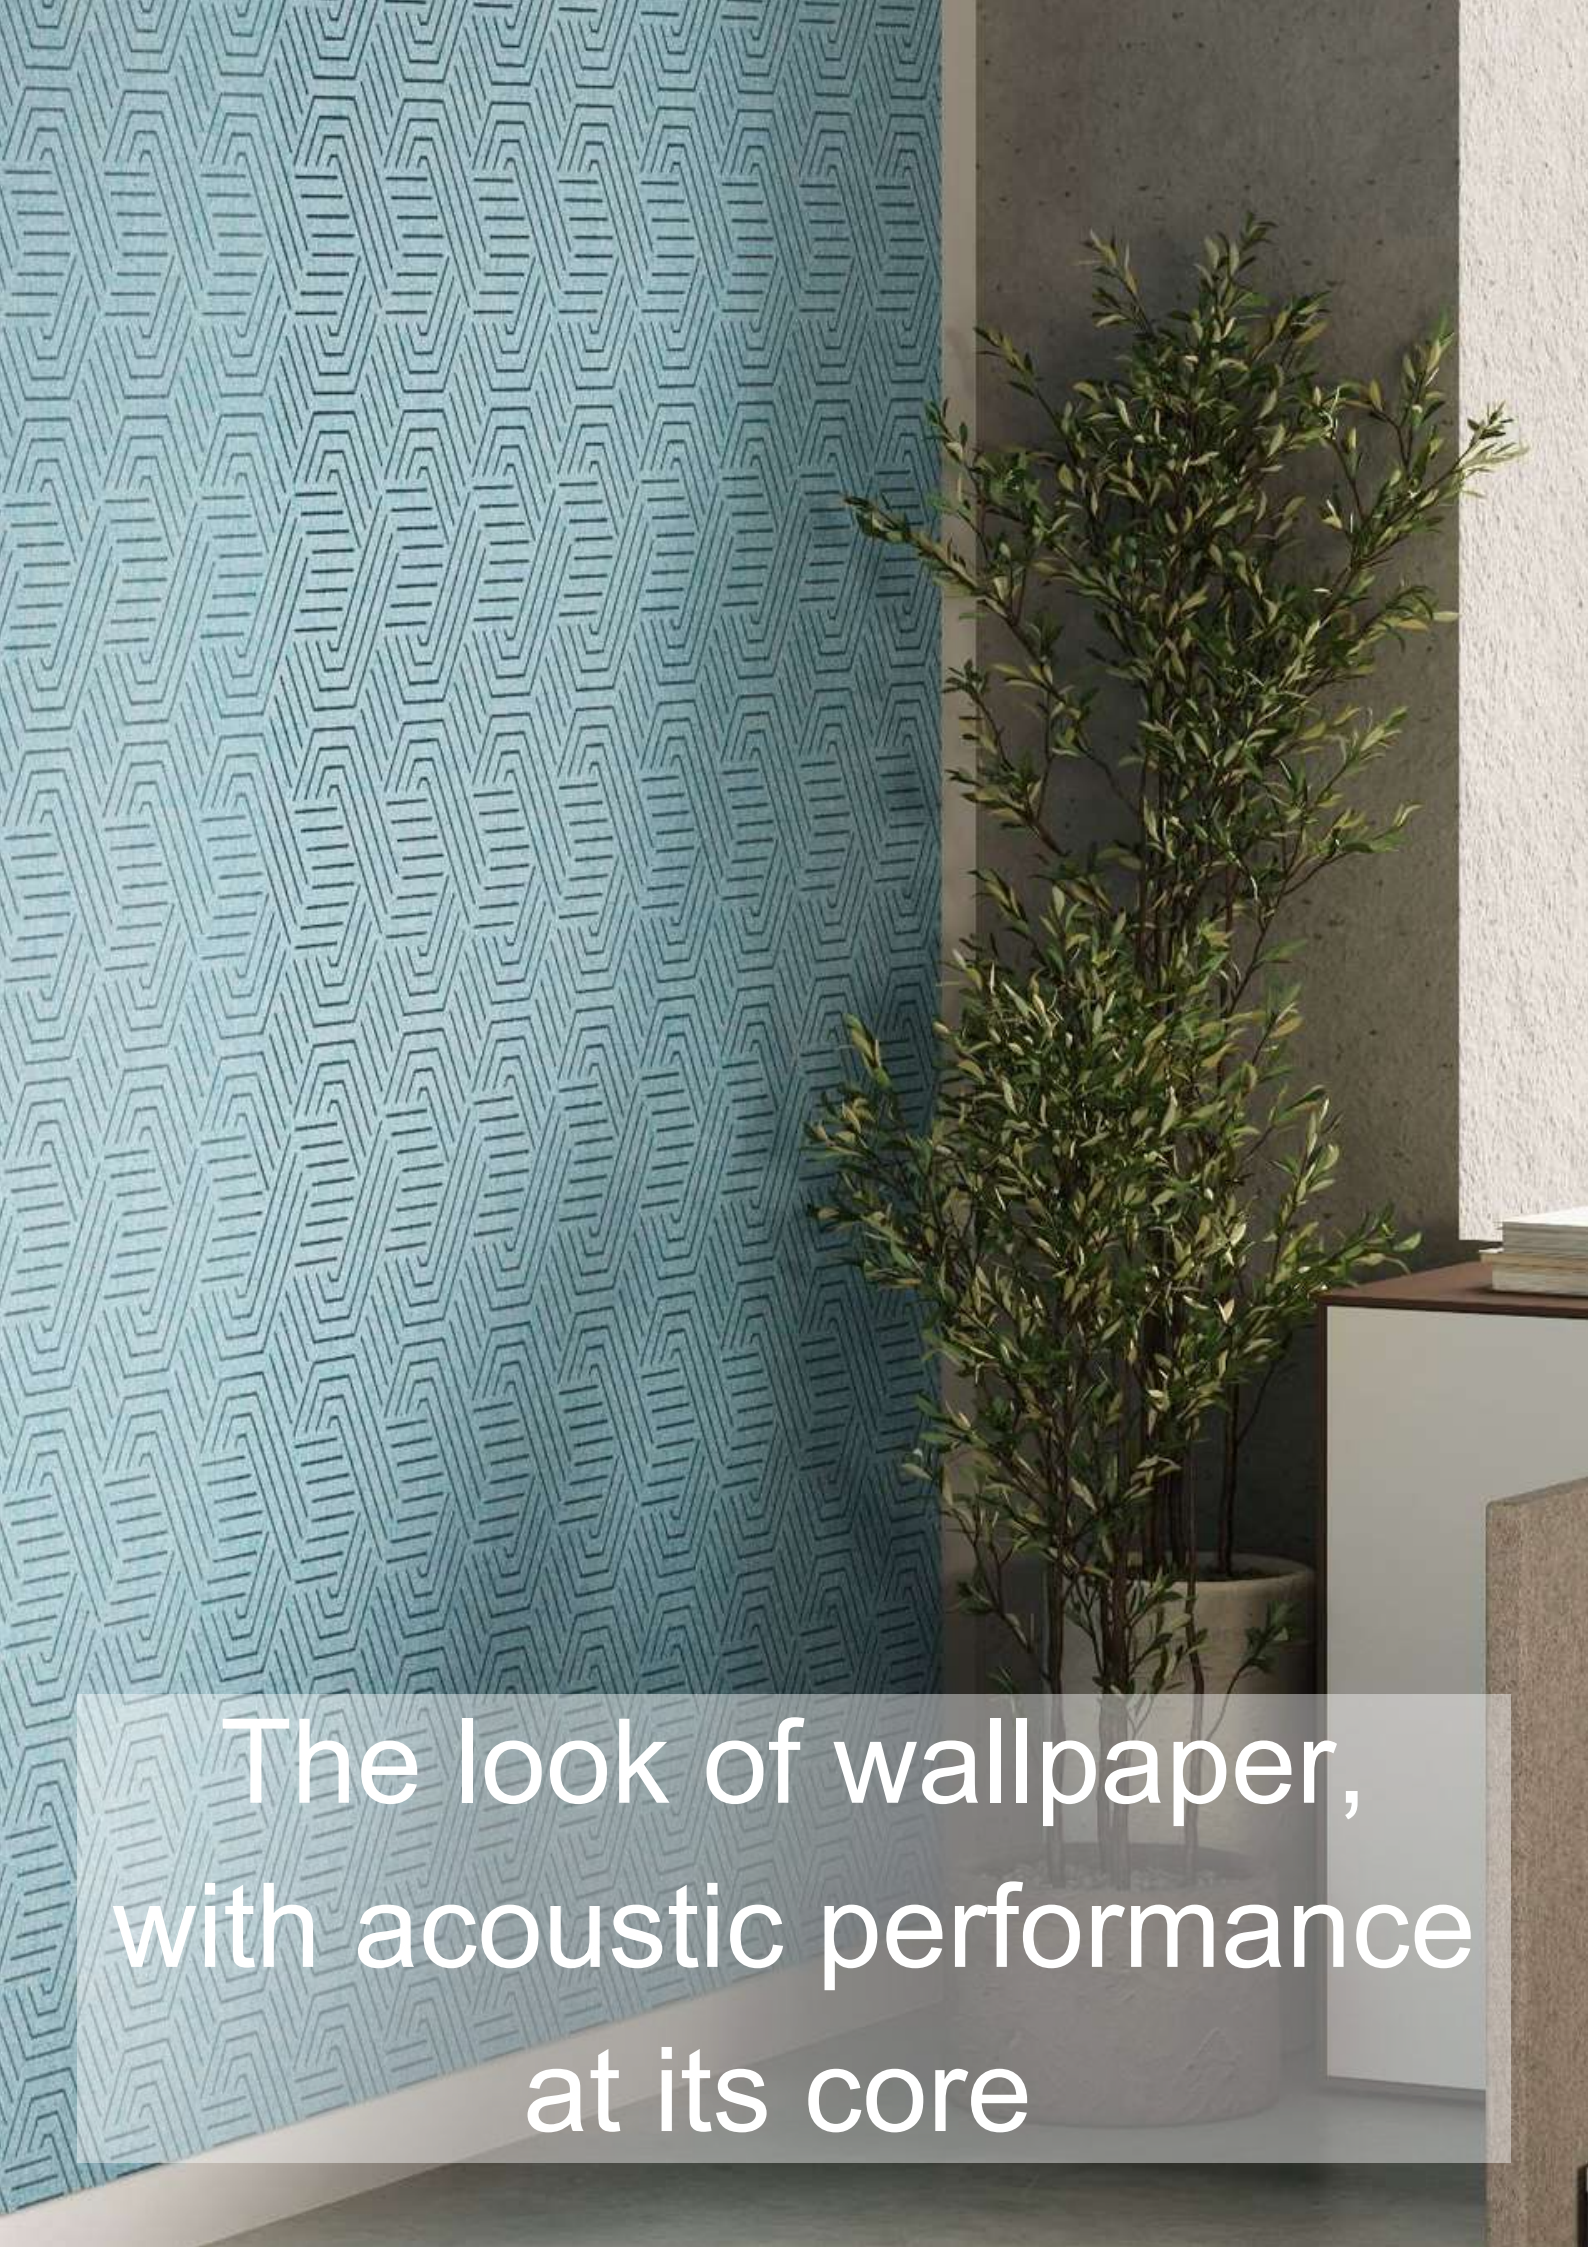

Zen Felt Wall Paper

Laser engraving creates subtle tone-on-tone patterns, with the design taking on a darker shade than the background to produce seamless surfaces with a rich, tactile and three-dimensional quality.

The four patterns — Scratches, Leaves, Knot and Geometries — offer different graphic languages, allowing each wall to acquire its own distinctive visual identity.

The image shows a modern interior space. On the left, a wall is covered in blue wallpaper with a repeating geometric pattern of interlocking lines. To the right, a tall, slender potted plant with green leaves stands next to a dark wooden shelf. On the shelf, there are some books. The overall aesthetic is clean and contemporary.

with acoustic performance
at its core

Zen Felt Cut Ceiling

Zen Felt Cut is a suspended acoustic baffle system that combines acoustic comfort with visual screening, creating lightweight partitions that define spaces without enclosing them. Precision CNC cutting shapes three distinctive patterns — Lines & Dots, Large Leaves and Small Leaves — creating openings that allow light to filter through while preserving visual continuity between spaces.

Zen Felt Cut Ceiling

The panels are suspended from the ceiling by slender steel cables and can be complemented with floor fixings for enhanced rigidity and stability. Lightweight and graphic in character, they are ideal for defining open-plan workspaces, operational areas, meeting spaces and hospitality environments, while simultaneously helping to reduce reverberation and improve overall acoustic comfort.

Zen Felt Cloud

Zen Felt Cloud is a suspended horizontal acoustic baffle system designed to enhance acoustic comfort while transforming the ceiling into a distinctive architectural feature.

Ideal for offices, meeting rooms, collaborative areas, hospitality and contract environments, Zen Felt Cloud helps reduce reverberation while combining acoustic performance with visual lightness and a refined suspended design.

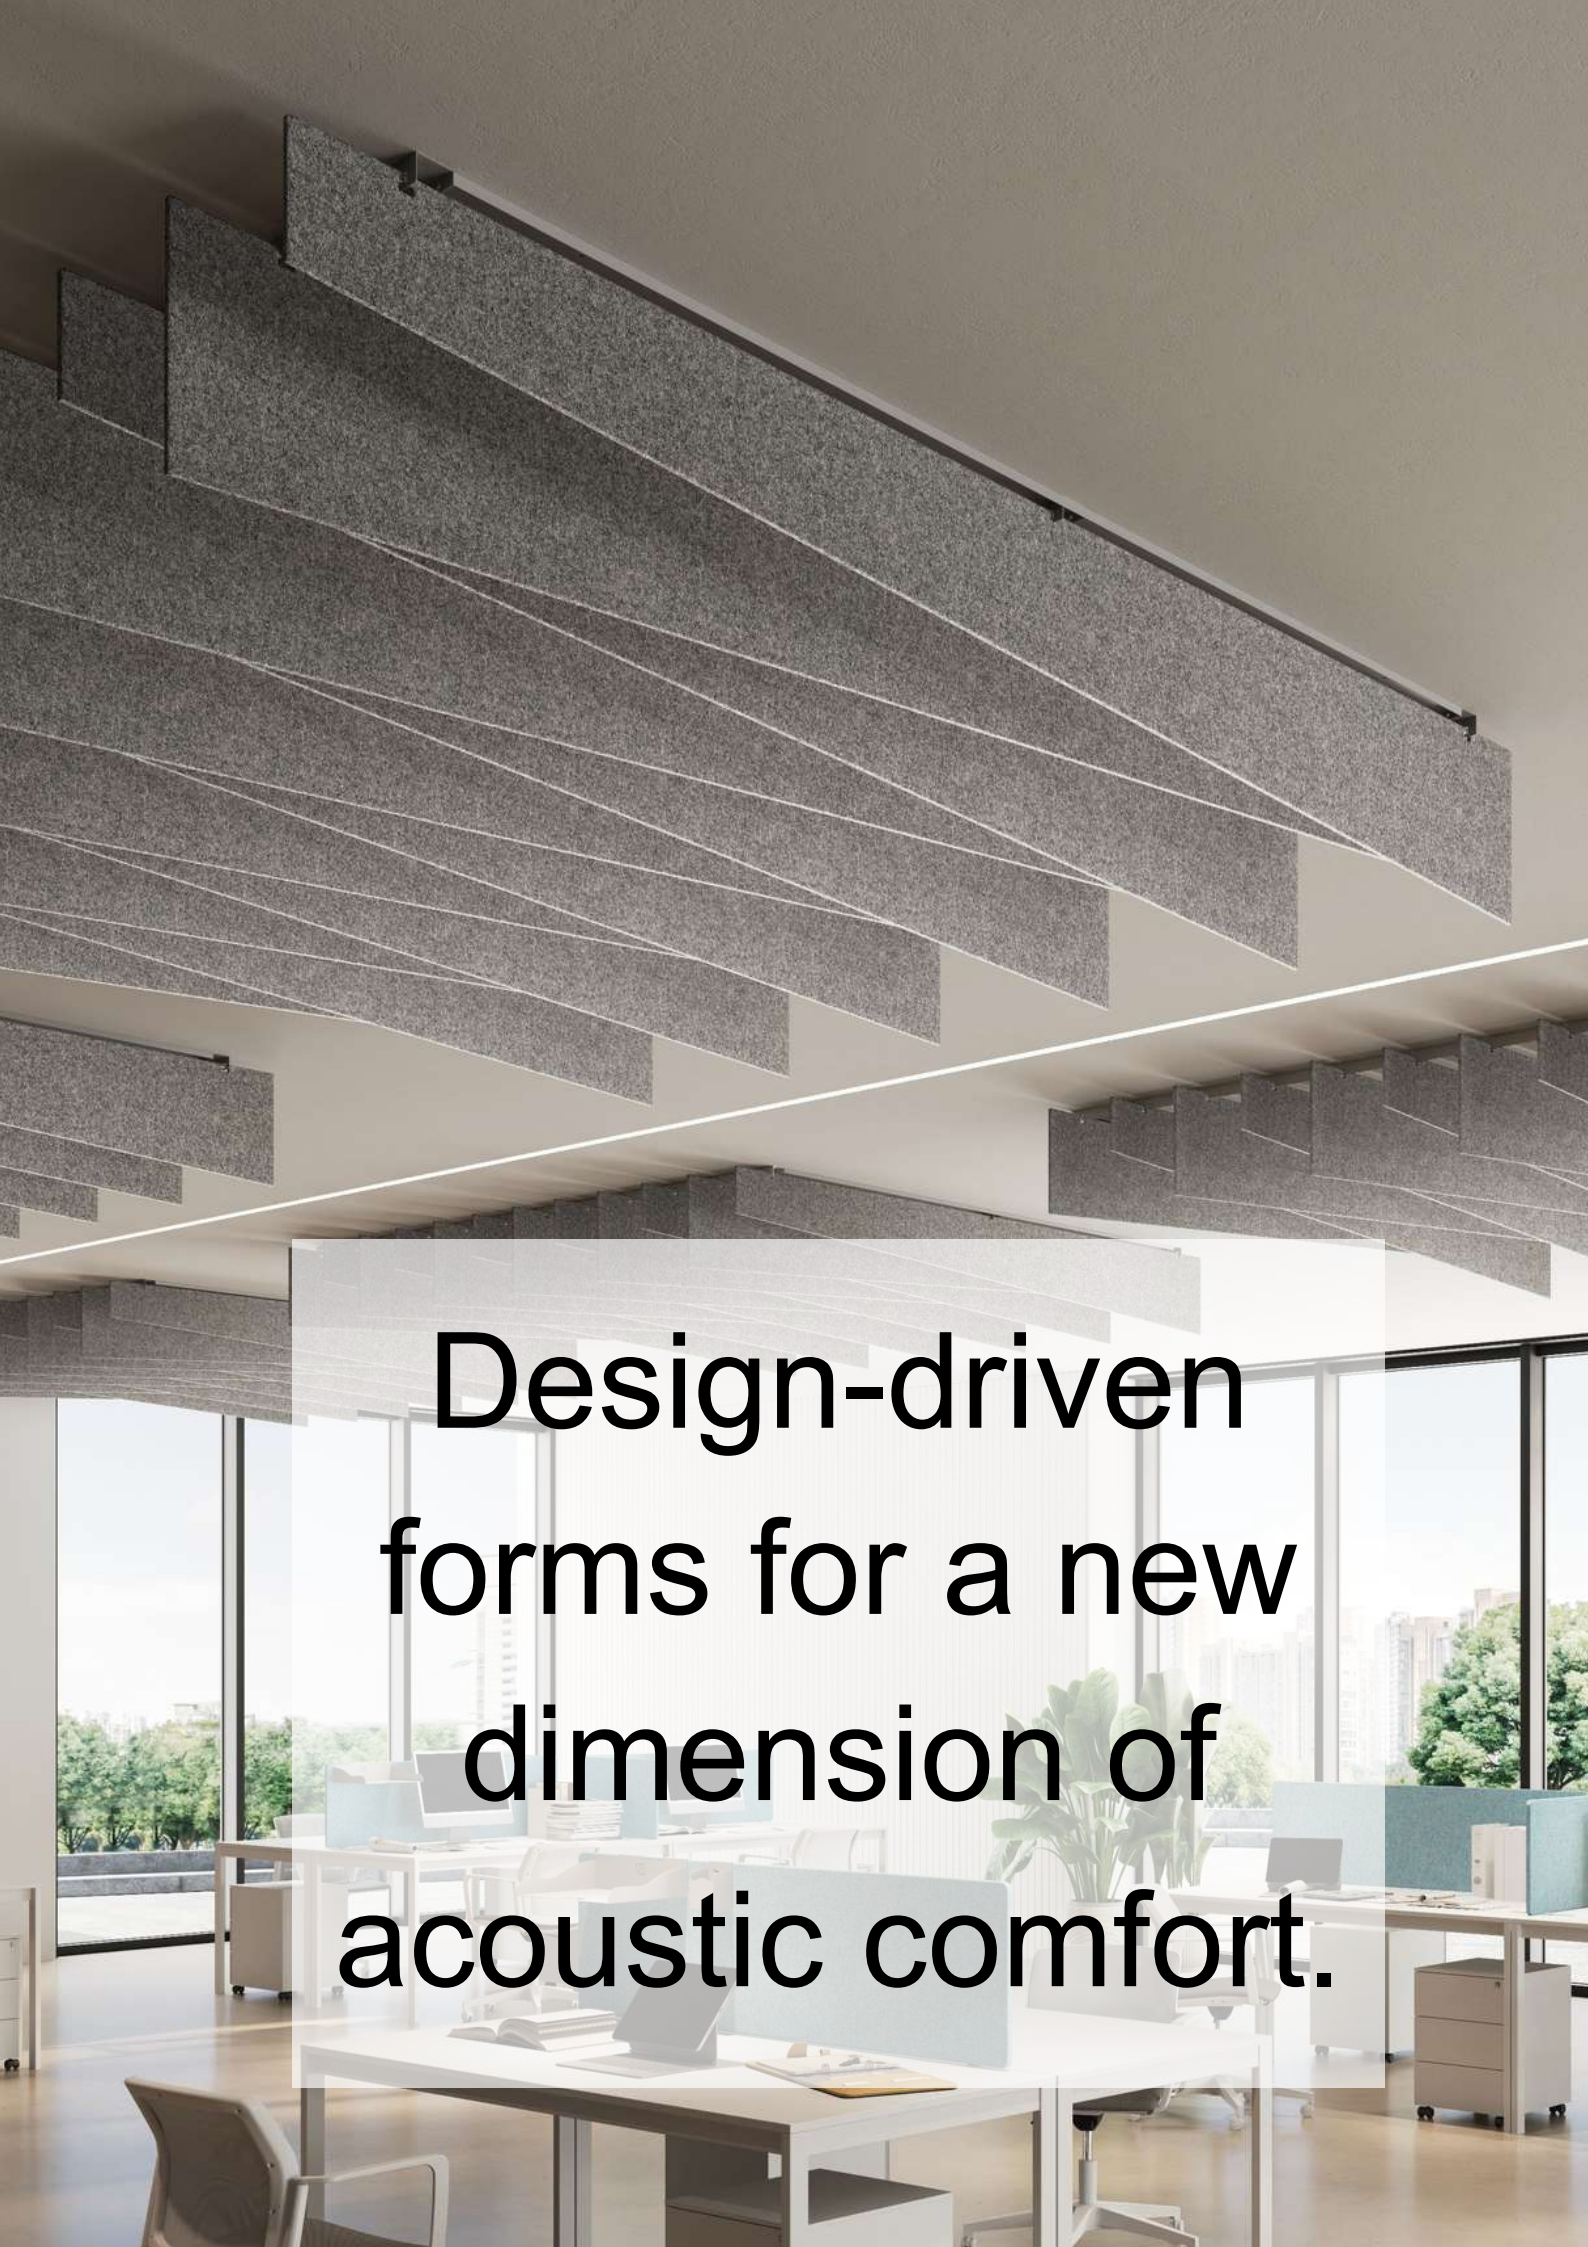

Zen Felt Cloud

The ReFelt® PET sound-absorbing panels are arranged in sequence on a metal frame and are available with either linear or curved profiles, allowing for compositions with different architectural expressions. A specially designed slot-and-hook connection system simplifies installation while ensuring precise panel alignment, with no visible fixings for a clean, seamless aesthetic.

A modern office interior featuring blue acoustic cubicles. In the foreground, a white desk is equipped with a laptop, a notebook, and a white ergonomic office chair with a yellow seat. The cubicle walls are made of blue acoustic panels. In the background, another cubicle is visible, and a wall is covered with various papers and notes. Large windows on the left and right sides provide natural light and a view of trees outside. The ceiling is a concrete slab with a series of rectangular acoustic panels suspended from it in a staggered pattern.

Suspended,
Lightweight,
Acoustic

A modern office interior featuring a ceiling with large, dark, textured acoustic panels arranged in a staggered, overlapping pattern. The office has large windows on the right side, providing a view of a city skyline and greenery. In the foreground, there are white desks with computers, ergonomic chairs, and light blue privacy screens. A large potted plant is visible near the windows. The floor is a light-colored wood or laminate.

**Design-driven
forms for a new
dimension of
acoustic comfort.**
